CONTACT PRECAUTIONS

(in addition to standard Precautions)

PRECAUCIONES PARA EL CONTACTO CON PACIENTES

(además de las Precauciones Estándar)

VISITORS

Report to nurse before entering.

Hand Hygiene

Use soap and water.
DO NOT use alcohol-based sanitizers.

Gloves

Don gloves upon entry into the room or cubicle.

Wear gloves whenever touching the patient's intact skin or surfaces and articles in close proximity to the patient.

Remove gloves before leaving patient room.

Gowns

Don gown upon entry into the room or cubicle.

Remove gown and observe hand hygiene before leaving the patient-care environment.

Patient Transport

Limit transport of patients to medically necessary purposes.

Ensure containment of stool to prevent soiling of the environment.

Remove and dispose of contaminated PPE and perform hand hygiene prior to transporting patients on Contact Precautions.

Don clean PPE to handle the patient at the transport destination.

Patient-Care Equipment

Use disposable noncritical patient care equipment or implement patient-dedicated use of such equipment.

STOP ALTO

VISITANTES

Consulte con la enfermera antes de entrar.

La Higiene de las Manos

Use agua y jabón.
NO use desinfectantes a base de alcohol.

Guantes

Póngase guantes al ingresar en la habitación o cubículo.

Use guantes cada vez que toque la piel sana del paciente o superficies y artículos que estén muy cercanos al paciente.

Sáquese los guantes antes de salir de la pieza del paciente.

Batas

Use una bata al ingresar en la habitación o cubículo.

Quítese la bata y observe las normas de higiene de las manos antes de retirarse del entorno de atención del paciente.

Traslado de Pacientes

Limite el traslado de pacientes a propósitos médicamente necesarios.

Asegúrese de que las áreas infectadas o colonizadas del cuerpo del paciente estén contenidas y cubiertas.

Elimine y deseche el EPP contaminado y realice la higiene de las manos antes de trasladar a los pacientes según las Precauciones por contacto.

Use EPP limpio para manejar al paciente en el destino de traslado.

Equipo Usado por el Paciente

Utilice equipos para la atención de los pacientes desechables no críticos o implemente el uso de dichos equipos de acuerdo con cada paciente.

COMMUNITY ACQUIRED PNEUMONIA			
IDSA/ATS 2019 Guidelines			
DIAGNOSIS	Blood cultures	Do NOT obtain if managed as outpatient or routinely in inpatients.	Obtain if inpatient and severe PNA or risk factors for MRSA/pseudomonas (empirically treated, history of prior MRSA/pseudomonas infection, or hospitalized w/IV antibiotics in past 90 days).
	Sputum culture	Do NOT obtain if managed as outpatient.	Obtain if inpatient and severe PNA or risk factors for MRSA/pseudomonas (empirically treated, history of prior MRSA/pseudomonas infection, or hospitalized w/IV antibiotics in past 90 days).
	Procalcitonin	Recommend that empiric antibiotic therapy should be initiated in adults with clinically suspected and radiographically confirmed CAP regardless of initial serum procalcitonin level (strong recommendation, moderate quality evidence)	
	Legionella & Pneumococcal Urinary Antigen	Suggest not routinely testing in patients with CAP unless indicated by epidemiological factors (associated with outbreak or travel) or severe CAP	
	Influenza	Test for influenza if it's circulating	
SEVERITY	2007 IDSA/ATS Criteria	Major criteria (any): Septic shock requiring vasopressors or Need for mechanical ventilation	Minor criteria (≥3): Respirations ≥30 /min, multilobar infiltrates, AMS, BUN >20, WBC <4K, Platelets <100K, Hypothermia, Hypotension requiring "aggressive" fluids.
		Recommend the use of the Pneumonia Severity Index (PSI) over CURB-65 in addition to clinician judgment. This recommendation is based on a study demonstrating the PSI identifies a larger number of patients who can be treated as outpatients compared with the CURB-65 (Augshey, Am J Med 2005;118: 394-399). Conditionally recommend CURB-65 over clinician judgment alone	
DISPOSITION	Outpatient vs Inpatient	Recommend the use of the Pneumonia Severity Index (PSI) over CURB-65 in addition to clinician judgment. This recommendation is based on a study demonstrating the PSI identifies a larger number of patients who can be treated as outpatients compared with the CURB-65 (Augshey, Am J Med 2005;118: 394-399). Conditionally recommend CURB-65 over clinician judgment alone

Pneumonia Pneumonia Prevention Guidelines eAAA Online Verson Pneumonia Prevention Guidelines eAAA Print Verson Cdc-pdf[PDF eAAA 811 KB] Tests are available to help diagnose invasive pneumococcal disease and pneumonia. It eAAA also possible to find a specific disease and determine at what age a person should have the vaccine. The vaccine recommendations have color-coding that indicate under what conditions the patient should have the vaccine. Avoid people who are sick. If you are sick, stay away from others as much as possible to keep from getting them sick. Vaccines and appropriate treatment (like antibiotics and antivirals) could prevent many of these deaths. They prevent the spread of infectious disease and reduce the risk of developing life-threatening illnesses. Both vaccines are safe and effective, but they cannot be given at the same time. These bacteria can cause a wide range of infections eAAA like pneumoni eAAA known as pneumococcal disease. To use it, answer questions about gender, age and medical history. If you eAAA are unsure if you or your children need a vaccine, refer to the Centers for Disease Control and Prevention (CDC) immunization schedule. What is the CDC Immunization Schedule? Each year, the CDC releases recommended immunization schedules that list the vaccines people should have based on their ages. Lower your risk of pneumonia with vaccines and other healthy living practices. You can locate your age or the age of your child and scroll down to see the recommended vaccinations. Talk to your doctor about when to come back to get PPSV23. Vaccines play an important role in health care. If you are recommended to or want to receive both vaccines: Get PCV13 first. The tool produces a list of vaccines for individuals to discuss with their doctors. How Do You Read the CDC Immunization Schedule? The information on the immunization schedule is arranged so that it eAAA is easy to read. You can also help prevent respiratory infections Hand wash Clean regularly and disinfect the surfaces that are touched very cough or sneezing in a fabric or your elbow or sleeve by limiting contact with cigarette smoking or quit smoking taking care of medical conditions (such as asthma, diabetes or heart disease) Pneumonia is an infection of the lungs that can cause mild to serious diseases in people of all ages. Some patients with Coronavirus 2019 disease (Covid-19) had pneumonia. Polysaccharide pneumococcal vaccine (ppsv23) CDC recommends all adults 65 years or old get a shot of ppsv23. Pneumococcal conjugate vaccine (pcv13) recommends that adults 65 years old or older get a shot of PCV13 if they have never received a dose and have one: condition that weakens the "cerebrospinal fluid fluid fluid losses the elderly who have never received A dose and not having one of the conditions described above could also discuss vaccination with your vaccine supplier to decide if PCV13 is appropriate for them. You can sort information about programs for ages or indication. The children of six months and Older should also have the influenza vaccine every year, observe the CDC. More from question ment list ed .net doctors use graphs as guidelines for when suggesting vaccines for their patients report the American Academy of Family Physicians. The CDC also has a Recovery Chart that doctors and patients can use to identify vaccines that may have skipped i N past but it's now necessary. The CDC releases immunization programs for doctors and parents. Some people are more likely to get pneumonia: adults 65 years or 5 year old children who have medical people going people smoking radiographic chest cigarettes of an adult patient otuvcir otuvcir Aig lah eS .onna ingo odnom li otut ni enosrep id incolim etnemlitimi ecspioez ,inomlop ted enoizefni'nu .ainomu eP . etinomlop ersuac itlut onossp ihguif e irettab ,etnomlop id suriv wait at least a year after that shot before you get PCV13. CDC data showed that in the United States during 2018: 1.5 million people were diagnosed with pneumonia in an emergency department Approximately 44,000 people died from pneumonia Most of the people affected by pneumonia in the United States are adults. Two vaccines offer protection against pneumococcal disease: PCV13 and PPSV23. They also have access to a chart that lists diseases, symptoms and complications and the vaccines that prevent them. What Information is Available With the Immunization Schedules? The immunization schedules designed for healthcare providers includes additional information like situations when individuals need specific immunizations and contraindications for vaccines. Pneumonia can often be prevented and can usually be treated. Parents also have access to the charts so they can discuss vaccinations with doctors and to track the vaccines they

and their children receive.Where Do You Find the CDC Immunization Schedule?The CDC posts its immunization schedules on its website and the app available for smartphones and tablets. Common signs of pneumonia can include fever, cough, and trouble breathing. For example, adults should have one dose of the influenza vaccine each year. There are two schedules: one for adults and one for children 18 years old and younger. Learn more about COVID-19. CAA & Conditions that weaken the immune system include: chronic renal failure, nephrotic syndrome, immunodeficiency, iatrogenic immunosuppression, generalized malignancy, human immunodeficiency virus, Hodgkin disease, leukemia, lymphoma, multiple myeloma, solid organ transplants, congenital or acquired asplenia, sickle cell disease, or other hemoglobinopathies. There are also links to changes to the current schedule as well as resources for medical professionals and patients.In addition to resources for health care providers, the CDC provides schedules designed ongosib .iniccav ied iniccav i erainmreted a itluda ilg atuia ehc enoizaniccav id otnemurts onu emoc erosir ehcna erffo CDC ILCDC li amreffa ,JRMm(ailosor alled e etitorap alled ,ollibrom led oniccav li erevecir orebbervod non aznadivarg ni ennod el ,oipmese dA ,oniccav ingo rep isod id otalginoc oremun li edulcni non elapicnirp enoizacifinaip aL ,)91-divoC asuac ehc suriv lii 2-voC-SRAS e)VSR(oirotarispur laitycnis suriv ,ilazneulfini suriv onos elariv etinomlop alled inumoc esuac el ,itinU itatS ilgeN ,joccccomuemp(eainomuenP succocotpertS "À acirettab etinomlop id enumoc asuac anU ,etinomlop alled esuac ellus 'Àip id enrepas rep erotalitnev a ataicossa etinomlop al e airatinas aznetsissa'lla ataicossa etinomlop al ,joiratinas etneibma nu ni non(Àtinumoc allad atisiuqca etinomlop al ,etinomlop al noc isralamma onossop enosrep el iuc ni idom isrevid onos iC ,'Àip o inna 56 id itluda ilg art acciccocomuemp aittalam al erineverp a onatuaia ehc iniccav eud onos iC ,airatinas e atisiuqca Àtinumoc alla ataicossa etinomlop al rep onairav otnemattart li rep adiug eenil el ,.irotineg

Pneumonia is an infection of the lungs that can cause mild to severe illness in people of all ages. Vaccines can prevent some types of pneumonia. You can also help prevent pneumonia and other respiratory infections by following good hygiene practices. These practices include washing your hands regularly and disinfecting frequently touched surfaces. Links with this icon indicate that you are leaving the CDC website.
